FIG. H. PORTUGAL MAUSER-VERGUIERO MAGAZINE RIFLE. Calibre, .256 or 6.5 m/m., five shots. Model of 1904. This Mauser differs from the others at the breech as the bolt handle is placed farther forward so that it sets in front of the rear end of the body and directly over the magazine. (See cut.) The safety is also of a different pattern. The fore end is the same as the model 1907, the standard arm of China. The bayonet blade is 10 inches in length and has a handle of a new design. The magazine is the same as the model '98. This is the smallest calibre yet used in a Mauser rifle.
